Special notes for homeowner: _____

**Monarch Pool Care evacuates the lines and applies winterizing chemicals as a means of preventative maintenance for the winter season. However, many factors beyond the closing process (i.e. length of closure, attention to the pool during closure, weather, etc.) may result in freezing and/or greening of pool water or staining of pool surfaces. Because these factors are beyond our control, Monarch Pool Care cannot guarantee against freeze damage, staining or greening of the pool water at opening.
